Detailed description of our product

"Pitt Box" U.S. Border Patrol Dog Kennel – Our kennels are built to house up to a 100lb dog. All edges are fabricated to eliminate injury to the animal. The front entrance of the kennel is easily accessible and can be secured with a common pad lock. The kennel is made of durable aluminum to provide a minimum life expectancy of twenty years. Our roof is designed with an arch in order to eliminate the opportunity for debris buildup, while still providing adequate protection from the rain and sun for the dog. The enclosure has a drain system that can be hooked up to the sewer system, for easy clean up and removal of waste and water. The attached doghouse is aluminum, insulated, with a

lockable access lid, allowing for easy cleanup. Ventilation ports are found on either side of the enclosure of the doghouse and can be adjusted from the inside, as well as the outside. The flooring is made with a smooth removable base, free of debris, preventing injury to the canine and easy to sanitize. These enclosures will ship in a self contained manor, with all hardware and manuals packaged inside.

Ask us for our accessories, individually designed and produced for your exact needs. These include automatic watering system, custom water bowls, solar lighting and solar comfort packages.
